Marine & Offshore Solution Guide

Diesel Engines, Propulsion Systems, Generator Sets, Automation

Edition 2/18
valid from 08/2018

Power. Passion. Partnership.

MTU:
Power.
Passion.
Partnership.

MTU is the core brand of Rolls-Royce Power Systems AG, which is a world-leading provider of high- and medium-speed diesel and gas engines, complete drive systems, distributed energy systems and fuel injection systems for the most demanding requirements.
Especially within the shipping sector the company has established a long and successful partnership with some ten thousands of engines in operation around the globe on all seas. Based on its innovative capabilities, its reliability and system expertise, MTU combines unique propulsion system know-how and a large range of products of excellent quality.
Together with MTU's full product and customer services the benefit is yours, as highest availability is on your disposal, no matter where you are based.

For more information about MTU Products please contact our marine experts:
www.mtu-online.com/contact

MTU applies a policy of continual products and systems improvements. Please note, specifications are subject to change without notice. All dimensions are approximate. Details are subject to options selected. Please contact your MTU distributor for current information and binding data.

Selection guideline
Marine and offshore service & supply

MTU application group >		1A	1B	1D	1DS
v Mechanical propulsion engines					
Yacht	Planing			■	■
	Semi planing			■	■
	Small displacement		■	■	■
	Large displacement > 120 ft.	■	■	■	■
Cargo ships & tankers	Inland freighters	■			
	Coastal ships	■			
	Sea-river ships	■			
Passenger ships	Tourist boats	■	■		
	Passenger ferries		■		
	Cabin cruisers	■	■		
RoPax ferries	Double-ended ferries	■	■		
	Fast ferries < 50 m	■	■		
	Fast ferries > 50 m		■		
Tugs & push boats	Tow & push boats	■			
	Harbour tugs	■	■		
	Coastal tugs	■			
	Escort tugs	■	■		
Offshore vessels & crew boats	Crew boats	■	■		
	Offshore supply vessels	■	■		
	Anchor handling tugs	■	■		
	Pilot boats	■	■		
	Trawler (fishing vessels)	■	■		
	Firefighting vessels	■	■	■	
	Rescue vessels	■	■	■	
	Research vessels	■	■	■	
	Dredgers	■	■		
	Cable laying vessels	■			

MTU application group >		1A	1B	1D	1DS
v Mechanical propulsion engines					
Marine Naval Vessels	Fast attack crafts			■	■
	Corvettes			■	■
	Frigates and Destroyers		■	■	■
	Amphibious crafts		■	■	■
	Large amphibious and support vessels	■	■	■	
	Mine countermeasure vessels			■	
Patrol boats	Small patrol crafts		■	■	■
	Coastal patrol crafts	■	■	■	■
	Large patrol vessels > 120 ft.	■	■	■	■

MTU application group >	3A/3B	3A/3B
v Power generation and diesel-electric propulsion	50 Hz	60 Hz
On-board powergen	■	■
Diesel-electric propulsion	■	■
Emergency powergen	■	■

The guideline on page 6 - 7 gives a rough overview which MTU application groups can be considered for which type of vessel or business model. To allocate which MTU application group suits your demands best, the intended annual usage and the expected load profile have to be considered.

Selection guideline
Offshore exploration & production

Diesel engines for:

- Heavy lift vessel
- Diving support vessel
- Pipe-laying vessel
- Cable-laying vessel
- Subsea support vessel
- Well intervention vessel
  Accommodation vessel
- Drill ship
- Wind converter platform
- Fixed platform
- Tension-leg platform
- Jack-up rig
- Spar
- NUI
- Conductor support system
- Compliant power
- FLNG
- Semi-submersible
- FPSO
- Windfarm substation platforms

Diesel engines for power generation

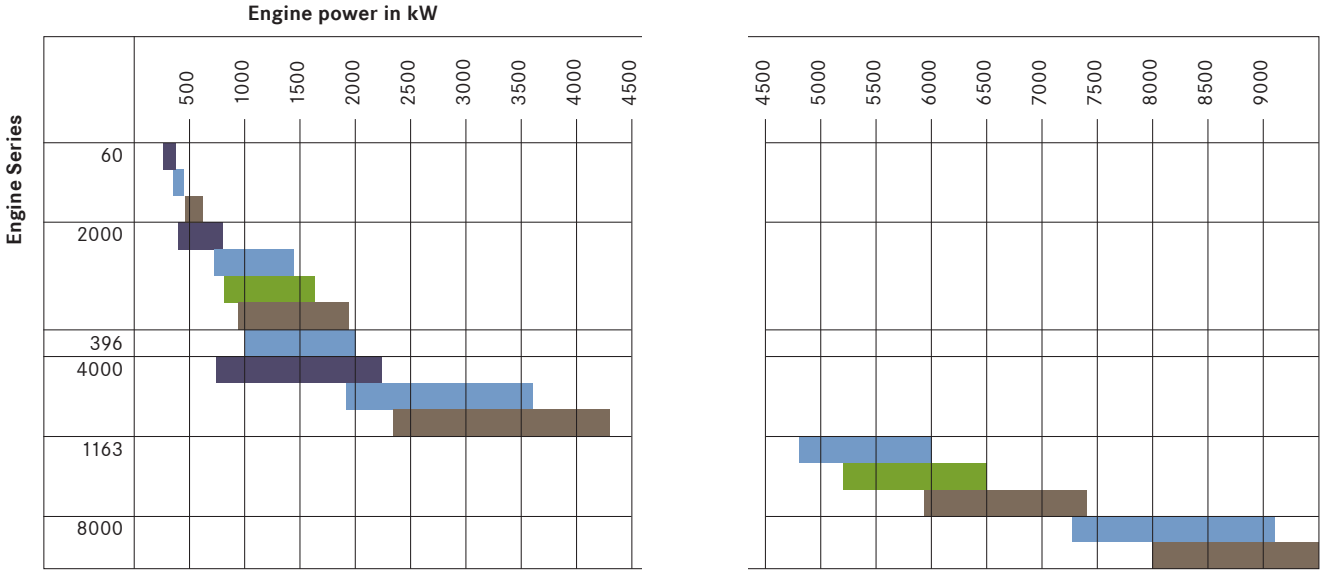
Power generation - constant speed

MTU application group >	3A	3B	3C
v Power generation	50 Hz/60 Hz	50 Hz/60 Hz	50 Hz/60 Hz
Power generation	x	x	x
Electric firepump drives		x	x
Electric drilling drives	x	x	

The guideline above gives a rough overview which MTU application groups can be considered for which type of vessel or business model. To allocate which MTU application group suits your demands best, the intended annual usage and the expected load profile have to be considered.

Power range
Marine and offshore service & supply

Main propulsion:



Engine power in kW

Engines	1A	1B	1D	1DS
60	261-373	354-447	–	466-615
2000	400-800	720-1440	810-1630	932-1939
396	–	1000-2000	–	–
4000	746-2240	1920-3600	–	2340-4300
1163	–	4800-6000	5200-6500	5920-7400
8000	–	7280-9100	–	8000-10000

1A - Engines for vessels with unrestricted continuous operation

Average load: 70 - 90 % of rated power; Rating definition: ICFN, fuel stop;
Typical annual usage: unrestricted*

1B - Engines for fast vessels with high load factors

Average load: 60 - 80 % of rated power; Rating definition: ICFN, fuel stop;
Typical annual usage: 5000 hours*

1D - Engines for fast vessels with intermittent load factors

Average load: ≤ 60 % of rated power; Rating definition: ICFN, fuel stop;
Typical annual usage: 3000 hours*

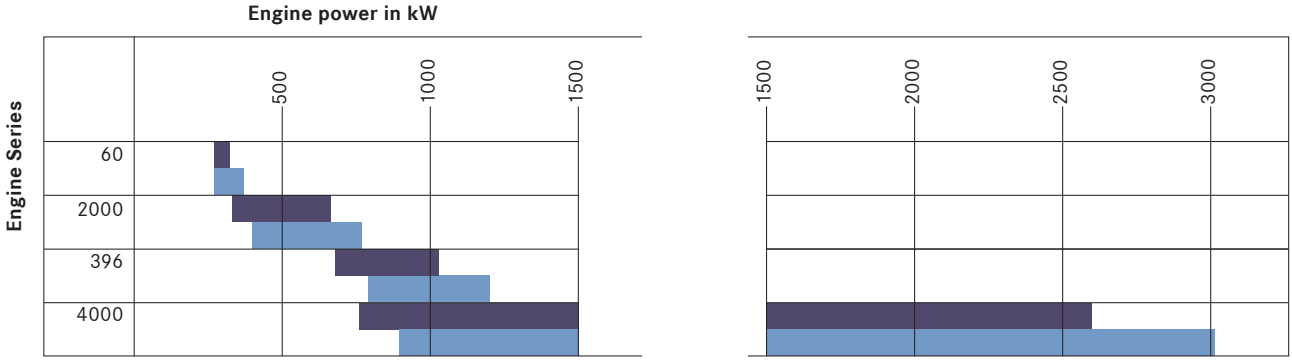
1DS - Engines for fast vessels with low load factors

Average load: ≤ 60% of rated power; Rating definition: ICFN, fuel stop;
Typical annual usage: 1500 hours*

* MTU application groups (page 6-9) only indicate which MTU engine suits your demands best. For your type of vessel, you can also choose engines from other MTU application groups than stated in the selection guideline.

Power range
Marine and offshore service & supply

Marine on-board power generation, diesel-electric drives and generator sets:



Engine power in kW

Engines	3A/3B	3A/3B
Frequency	50 Hz	60 Hz
60	271-322	271-370
2000	332-770	400-930
396	680-1030	790-1200
4000	760-2600	895-3015

Genset power in kWe*

Gensets	3A/3B	3A/3B
Frequency	50 Hz	60 Hz
MG 2000	310-730	370-880
MG 4000	720-1690	850-2150

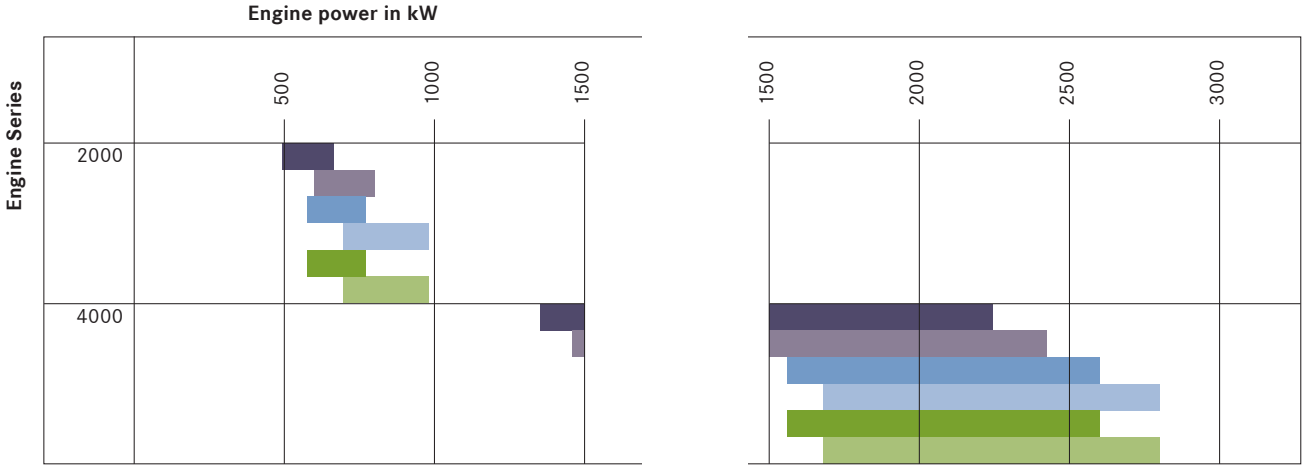
* alternator efficiency of 96% considered, excluding parasitic losses

3A/3B - Engines for onboard power generation and diesel-electric drive
Continuous operation 50 Hz; Rating definition: ICXN, 10% overload capab.
Continuous operation 60 Hz; Rating definition: ICXN, 10% overload capab.

MTU application groups (page 6-9) only indicate which MTU engine suits your demands best. For your type of vessel, you can also choose engines from other MTU application groups than stated in the selection guideline.

Power range
Offshore exploration & production

Engines and gensets for power generation:



Engine power in kW

Engines	3A	3A	3B	3B	3C	3C
Frequency	50 Hz	60 Hz	50 Hz	60 Hz	50 Hz	60 Hz
2000	498-664	600-800	575-770	695-980	575-770	695-980
4000	1350-2245	1455-2425	1560-2600	1680-2800	1560-2600	1680-2800

Genset power in kWe*

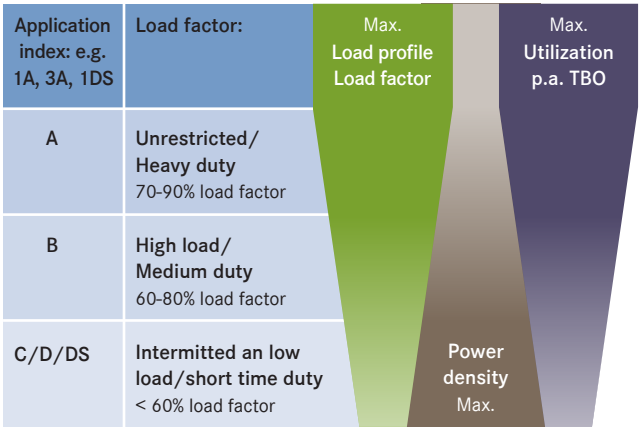
Gensets	3A	3A	3B	3B	3C	3C
Frequency	50 Hz	60 Hz	50 Hz	60 Hz	50 Hz	60 Hz
PP 4000	1295-2155	1395-2330	1500-2500	1615-2690	1500-2500	1615-2690

* alternator efficiency of 96% considered, excluding parasitic losses

MTU application groups (page 6-9) only indicate which MTU engine suits your demands best. For your type of vessel, you can also choose engines from other MTU application groups than stated in the selection guideline.

3A/3B/3C	Engines for power generation, electric fire-pump drives and emergency power – constant speed
3A	Continuous Power
50 Hz	Continuous operation power, unrestricted Rating definition: ICXN, 10% overload capability
60 Hz	Continuous operation power, unrestricted; Rating definition: ICXN, 10% overload capability
3B	Prime Power
50 Hz	Continuous operation with variable load Rating definition: ICXN, 10% overload capability
60 Hz	Continuous operation with variable load; Rating definition: ICXN, 10% overload capability
3C	Prime Power limited
50 Hz	Standby operation with variable load Rating definition: ICXN, 10% overload capability
60 Hz	Standby operation with variable load Rating definition: ICXN, 10% overload capability

MTU rating philosophy



MTU is working hard to meet and even exceed the increasing demands of ship owners and operators for cost-effective and eco-friendly solutions. One example is the engine TBO (Time Between Overhauls) which we optimize on the basis of field data analysis and close inspection of engines and components that have already proven their reliability in field operation. Depending on the analysis results, we extend maintenance and TBO intervals keeping safe operation assured.

MTU offers product lines specifically tailored to customer requirements. Some are laid out for high power density with ideal power-to-weight-ratios (application groups C, D and DS). Other product lines are specifically configured to achieve maximum service life at lower power densities. These are suitable for applications involving high load factors and runtimes up to 8,000 hours per year (application groups A and B).

Power definition

Power definition
The rated power of diesel and gas engines stated in this sales program corresponds to ISO 3046-1:2002 (E) and ISO 15550:2002 (E). The power produced at the flywheel will be within the tolerance of 3% - according to ISO 15550:2002 (E) – up to 25°C (77°F) combustion air temperature measured at the air cleaner inlet and up to 25°C (77°F) sea or raw water temperature measured at the seawater pump suction inlet, unless other values mentioned explicitly.
ICFN = ISO standard (continuous) fuel stop power
ICXN = ISO standard (continuous) power exceedable by 10% (ratings also apply to ISO 8665 and SAE J1228 standard conditions)

Barometric pressure:	1000 mbar
Site altitude above sea level:	100 m
Fuel specification for diesel:	EN 590 to ASTM D 975-00

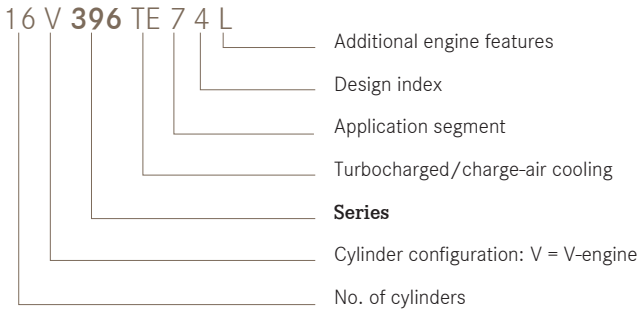
(Fuel consumption [with all pumps] in accordance with DIN ISO 3046 [except Series 60], values stated for IMO certification.)

General reference conditions for diesel engines and generator sets:
- Intake air temperature 25°C
- Sea water temperature 25°C
- Charge air coolant inlet temperature 45°C up to 65°C without deration

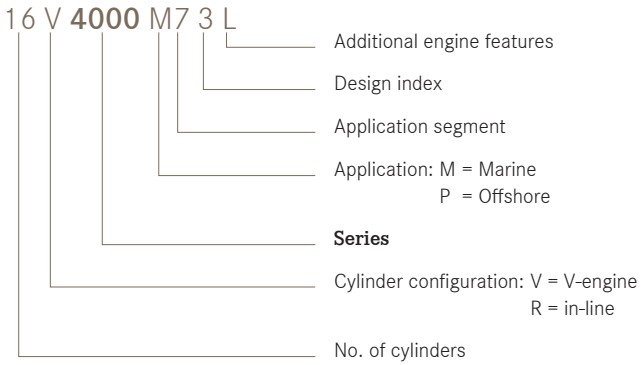
All engines are designed and built according to classification requirements, certificate on request.
Classification with:
- Unrestricted service for engines with 10% overload capacity
- Restricted service for engines without overload capacity

Explanation of the engine designation

Series 396 – Example:

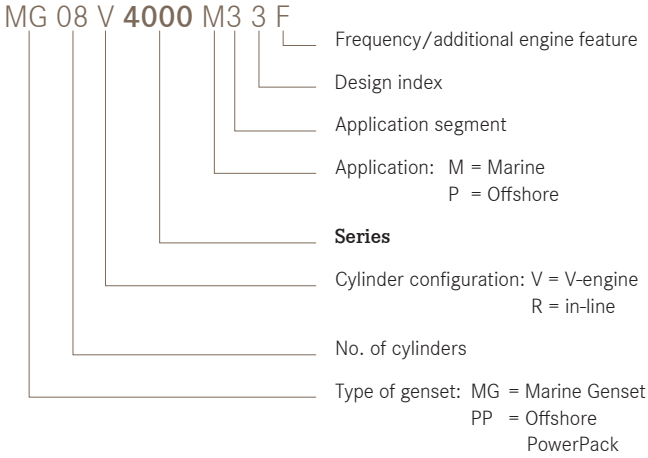


Series 2000 / 4000 / 1163 / 8000 – Example:



Explanation of the genset designation

Generator sets with Series 2000 / 4000 – Example:

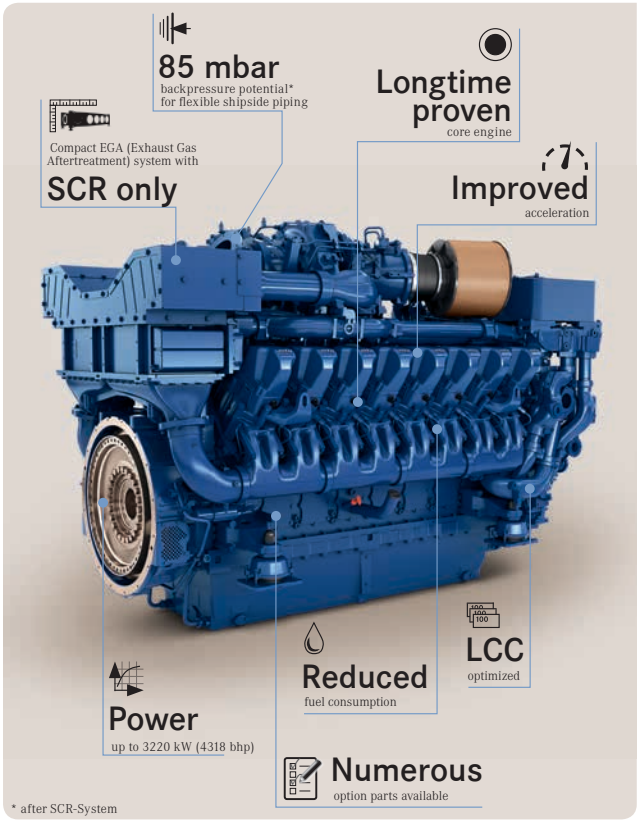


Turbocharged engines/gensets with	
Separate-circuit charge-air cooling	60 / 2000 P / 4000 P / 1163
Split-circuit charge-air cooling	2000 M / 4000 M / 396 TE / 8000 M

Additional engine/gensets features	
Power uprated	L
Gas Fuel	N
Power/speed reduced	R
Frequency	A or F (50 Hz)
	B or S (60 Hz)

Engines overview

New product introduction

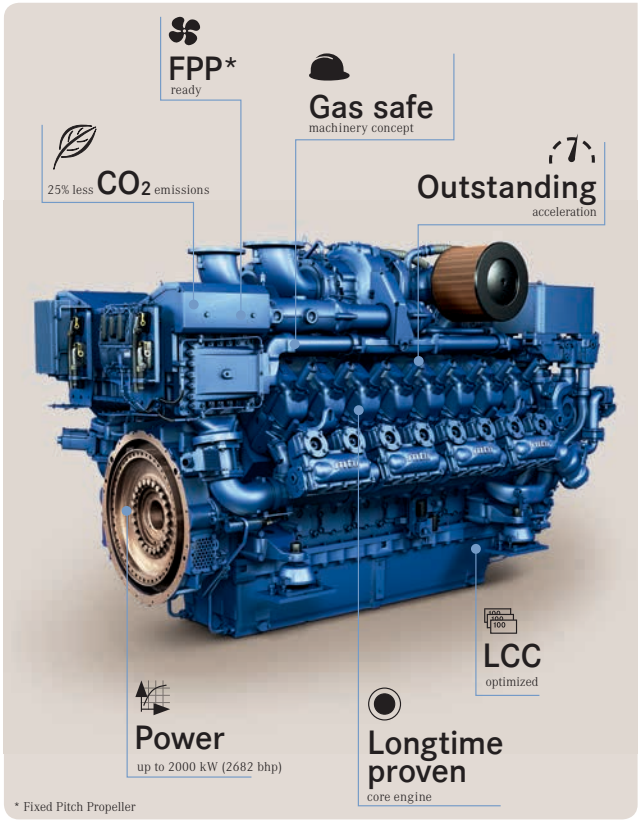


The new Series 4000 M05 – Diesel Engine

Our Series 4000 M05 for commercial marine applications is the latest marine engine of the powerful Series 4000 family. When designing the Series 4000 M05 we kept three topics always in our mind: Life-cycle costs, performance and ease of maintenance.

We used our legendary IRONMEN engines as a basis but finetuned it with high attention to detail to maximize durability, performance and efficiency. Only SCR is needed to fulfill IMO III and EPA Tier 4 emissions regulations.

MTU also helps customers to design and integrate the engine/SCR combination into their vessel design.



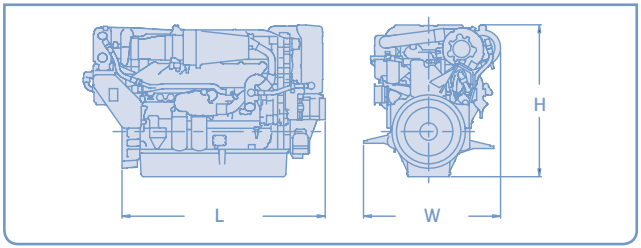
The new Series 4000 M05-N – Pure Gas Engine

Our Series 4000 M05-N for commercial marine applications is the latest marine engine of the powerful Series 4000 family. When designing the Series 4000 M05-N we kept three topics always in our mind: Life-cycle costs, performance and environmental friendlyness.

We used our legendary IRONMEN engines as a basis for the development of our pure gas engine. The engine will be equipped with a multipoint gas injection system, a dynamic motor management system and an advanced turbocharger design. The wide rpm range and engine map ensures that fixed pitch propellers can be used in the propulsion design.

On the test bench, it was possible to simulate real-life manoeuvres, which represented the dynamic acceleration behaviour of a diesel engine.

Overview Series 60

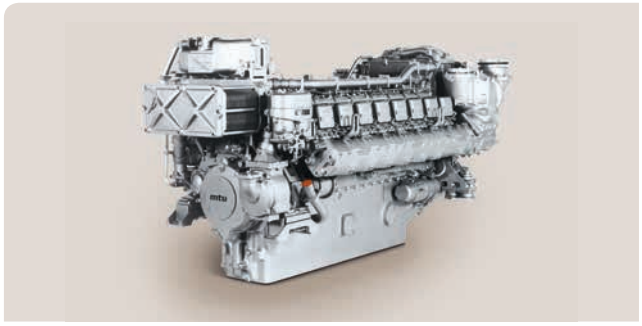


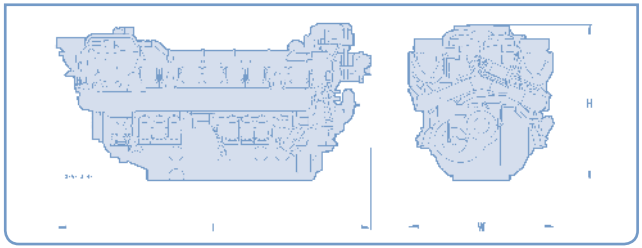
Marine and offshore service & supply

Engine	Displacement	Dimensions, max.	Mass, max.
Cylinder config.: 6 Cyl./ in-line	Total displac. l (cu in)	L x W x H mm (in)	(dry) kg (lbs.)
S60	14.0 (855)	1850 x 1035 x 1160 (73 x 41 x 46)	1633 (3600)

External heat exchanger version as standard, optional engine mounted.

Overview Series 396



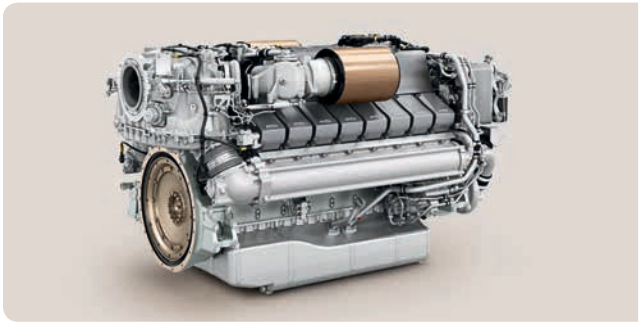


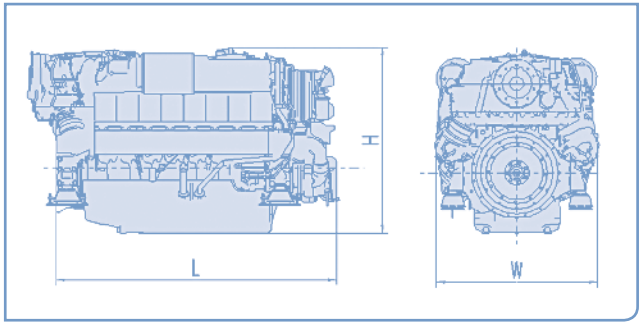
Marine and offshore service & supply

Engine	Displacement	Dimensions, max.	Mass, max.
Cylinder config.: 90°V	Total displac. l (cu in)	L x W x H mm (in)	(dry) kg (lbs.)
8V 396	31.7 (1933)	2005 x 1525 x 1540 (79 x 60 x 61)	3800 (8377)
12V 396	47.5 (2900)	2535 x 1525 x 1695 (100 x 60 x 67)	4900 (10803)
16V 396	63.4 (3868)	3070 x 1530 x 1660 (121 x 60 x 65)	6140 (13536)

External heat exchanger version as standard, optional engine mounted.

Overview Series 2000





Marine and offshore service & supply

Engine	Displacement	Dimensions, max.	Mass, max.
Cylinder config.: 90°V	Total displac. l (cu in)	L x W x H mm (in)	(dry) kg (lbs.)
8V 2000 M41/51/61	15.9 (970)	1435 x 1280 x 1315 (57 x 50 x 52)	1870 (4123)
12V 2000 M41/51/61	23.9 (1458)	2105 x 1400 x 1290 (83 x 55 x 51)	2756 (6064)
16V 2000 M41/51/61	31.8 (1943)	2525 x 1425 x 1290 (99 x 56 x 51)	3270 (7209)

Engine mounted heat exchanger as standard, external heat exchanger version as option.

8V 2000 M72/84/93/94	17.9 (1093)	1416 x 1130 x 1200 (56 x 45 x 47)	1970 (4343)
10V 2000 M72/86/96	22.3 (1361)	1604 x 1165 x 1347 (63 x 46 x 53)	2305 (5082)
12V 2000 M72/86/96	26.8 (1635)	1870 x 1295 x 1350 (74 x 51 x 53)	2810 (6195)
16V 2000 M72/86/96	35.7 (2179)	2258 x 1318 x 1455 (89 x 52 x 57)	3450 (7607)

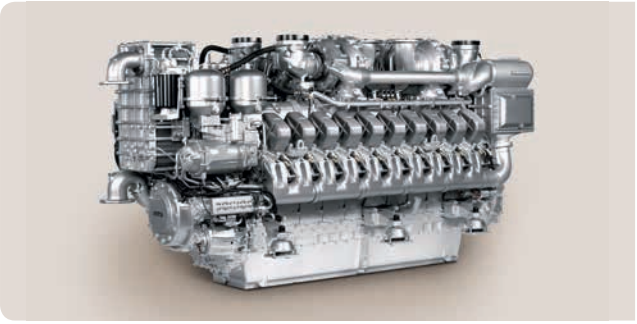
Engine mounted heat exchanger as standard.

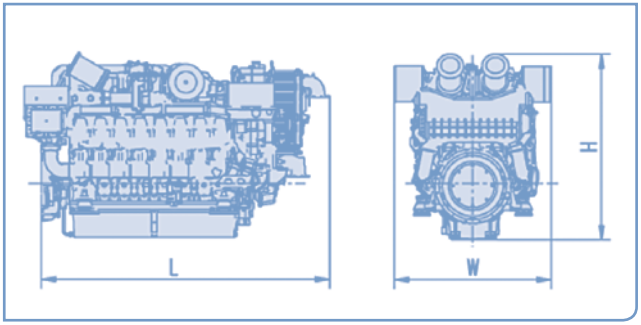
Offshore exploration & production

Engine	Displacement	Dimensions, max.	Mass, max.
Cylinder config.: 90°V	Total displac. l (cu in)	L x W x H mm (in)	(dry) kg (lbs.)
12V 2000 P62/82	23.9 (1458)	2165 x 1340 x 1490 (85 x 53 x 58)	2650 (5842)
16V 2000 P62/82	31.8 (1943)	2502 x 1430 x 1495 (99 x 53 x 59)	3060 (6746)

External heat exchanger version as standard.

Overview Series 4000





Marine and offshore service & supply

Standard stroke (190 mm)

Engine Cylinder config.: 90°V	Displacement Total displac. l (cu in)	Dimensions, max. L x W x H mm (in)	Mass, max. (dry) kg (lbs.)
12V 4000 M53B/73/93	51.7 (3155)	2870 x 1850 x 2185 (113 x 73 x 86)	8410 (18541)
16V 4000 M53B/73/93	69.0 (4210)	3510 x 1850 x 2185 (138 x 73 x 86)	9890 (21803)
20V 4000 M53B/73/93	86.2 (5260)	4040 x 1470 x 2440 (159 x 58 x 96)	12900 (28439)

Engine mounted heat exchanger as standard.

Long stroke (210 mm)

8V 4000 M23/24/ M33/53/54/63	38.2 (2331)	2386 x 1615 x 1972 (94 x 64 x 78)	5710 (12588)
8V 4000 M55RN	38.2 (2331)	2050x1820x2100 (81x72x83)	6100 (13448)
12V 4000 M23/ 33/53/63/24/34 54/64/25/35/65	57.2 (3491)	2750 x 1793 x 2370 (108 x 71 x 93)	8000 (17637)
16V 4000M23/ 33/43/53/63/ 24/34/54/64/ 25/35/65	76.3 (4656)	3270 x 1570 x 2370 (129 x 62 x 93)	9460 (20856)
16V 4000 M55RN M55-N/65-N	76.3 (4656)	3233 x 1820 x 2100 (127 x 72 x 83)	9555 (21065)

Engine mounted heat exchanger as standard, external heat exchanger version as option.

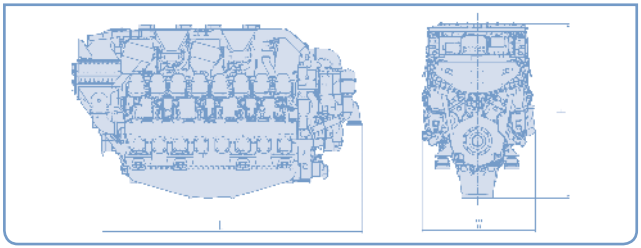
Offshore exploration & production

Long stroke (210 mm)

Engine Cylinder config.: 90°V	Displacement Total displac. l (cu in)	Dimensions, max. L x W x H mm (in)	Mass, max. (dry) kg (lbs.)
12V 4000 P63/83	57.2 (3491)	2530 x 1590 x 2065 (100 x 63 x 81)	7300 (16093)
16V 4000 P63/83	76.3 (4656)	3000 x 1590 x 2065 (118 x 63 x 81)	8800 (19400)
20V 4000 P63/83	95.4 (5822)	3470 x 1590 x 2065 (137 x 63 x 81)	10680 (23545)

External heat exchanger version as standard.

Overview Series 1163

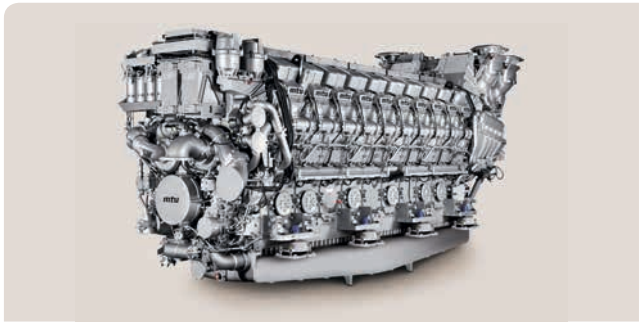


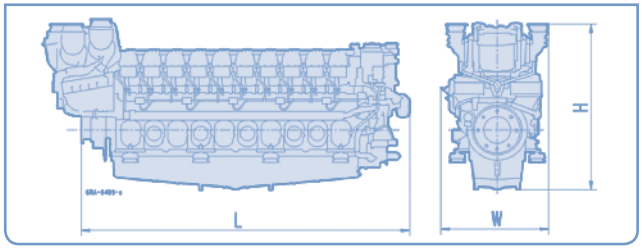
Marine and offshore service & supply

Engine	Displacement	Dimensions, max.	Mass, max.
Cylinder config.: 60°V	Total displac. l (cu in)	L x W x H mm (in)	(dry) kg (lbs.)
16V 1163	186.1 (11357)	4687 x 1918 x 3040 (185 x 76 x 120)	20590 (45393)
20V 1163	232.7 (14200)	5353 x 1918 x 3040 (211 x 76 x 120)	25000 (55116)

External heat exchanger version as standard.

Overview Series 8000



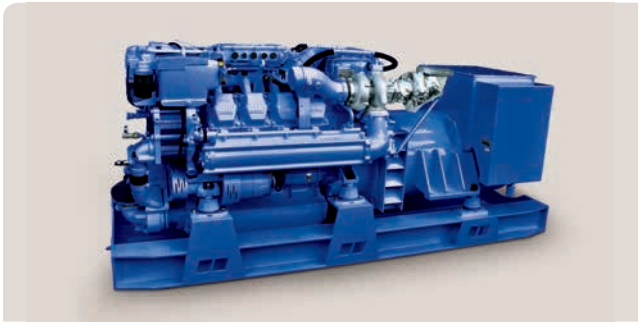


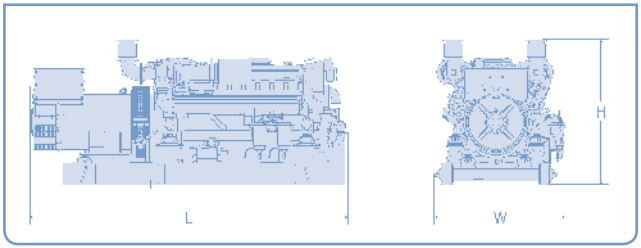
Marine and offshore service & supply

Engine	Displacement	Dimensions, max.	Mass, max.
Cylinder config.: 48°V	Total displac. l (cu in)	L x W x H mm (in)	(dry) kg (lbs.)
16V 8000	278 (16965)	5698 x 2040 x 3375 (224 x 80 x 133)	42000 (92594)
20V 8000	347.4 (21200)	6645 x 2040 x 3375 (262 x 80 x 133)	49600 (109348)

External heat exchanger version as standard.

Overview Series 2000 genset



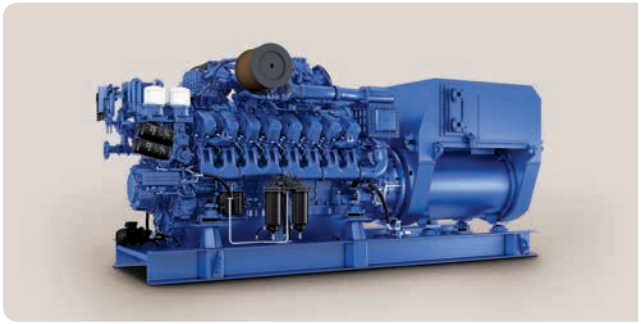


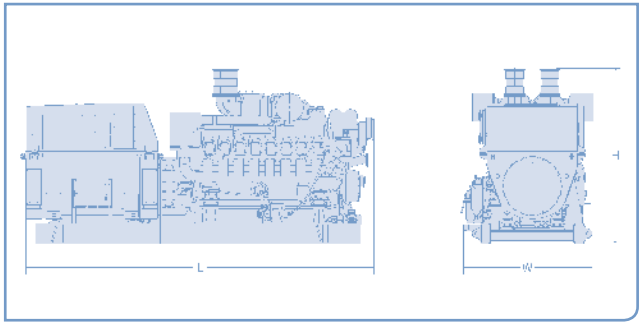
Marine and offshore service & supply

Genset model	Displacement Total displac. l (cu in)	Dimensions, max. L x W x H mm (in)	Mass, max. (dry) kg (lbs.)
MG08V 2000 M51/41	15.9 (970)	2900 x 1680 x 1550 (114 x 66 x 61)	3950 (8708)
MG12V 2000 M51/41	23.9 (1458)	3550 x 1680 x 1680 (140 x 66 x 66)	5400 (11905)
MG16V 2000 M51/41	31.8 (1943)	3900 x 1680 x 1760 (154 x 66 x 70)	6300 (13890)

Engine mounted heat exchanger version as standard, optional external cooling.

Overview Series 4000 genset





Marine and offshore service & supply

Long stroke (210 mm)

Genset model	Displacement	Dimensions, max.	Mass, max.
	Total displac. l (cu in)	L x W x H mm (in)	(dry) kg (lbs.)
MG08V 4000 M23/24/33	38.2 (2331)	4250 x 1825 x 2225 (167 x 72 x 87)	11240 (24780)
MG12V 4000 M23/24/33/34	57.2 (3491)	4700 x 1825 x 2285 (185 x 72 x 90)	14000 (30865)
MG16V 4000 M23/ M24/33/34/43	76.3 (4656)	5700 x 1965 x 2285 (225 x 78 x 90)	18500 (40786)

External heat exchanger version as standard, optional engine mounted.

Offshore exploration & production

Long stroke (210 mm)

Genset model	Displacement	Dimensions, max.	Mass, max.
	Total displac. l (cu in)	L x W x H mm (in)	(dry) kg (lbs.)

Systems solutions

Systems solutions
System expertise

MTU is one of the world's leading manufacturers of propulsion and power generation systems for marine applications: MTU products are used on all the world's oceans and in all marine areas.

For MTU, being a systems supplier means taking complete care of our customer's needs at any point of the life cycle. Our key technologies in diesel engine development and manufacturing comprising:
- Turbo charging units
- Fuel injection systems
- Engine management systems
- Automation systems

The key technologies are completed by validated and proven accessories like:
- Fuel treatment and filtration units
- Resilient engine mounts
- Resilient- and offset compensating couplings
- Gearboxes
- Exhaust silencers

Noise reduction technology
Double resilient mounting systems and active mounting systems are available for applications with the highest acoustic demands, such as comfort yachts or research vessels.

Emissions reduction technology
In addition to low emission diesel engines, MTU offers exhaust after treatment systems to meet the most stringent emissions requirements.
- Diesel particulate filters (DPF) with active regeneration:
  - Active filter regeneration via burner
  - Enabled for low load operation
  - Optimum in system reliabilty
  - PM-reduction up to 99 %
  - Class certified: LR, GL
  - Typical usage: yachts or commercial vessels with significant low load operation
- Diesel particulate filters (DPF) with passive regeneration:
  - Passive filter regeneration via DOC
  - Uncoated sinter metal filter
  - Compact and weight optimized design
  - PM-reduction higher than 95 %
  - Typical usage: commercial vessels with mainly high load operation like RoRo ferries
- Selective catalytic reduction (SCR) units:
  - Reduction of NO_x emissions of diesel engines
  - Enables customers to achieve IMO Tier III emission levels with current Tier II engines.
- Combined DPF+SCR
  The installation space required for conventional silencers can be reduced if the exhaust noise attenuation capabilities of the filter units and catalytic converters are taken into account.

Gas-protected operation
In order to maintain a high level of safety in dangerous, explosive environments, some engines of the 4000 and 8000 Series can be equipped for gas protection around flammable or explosive gases. Engines are equipped with a safety package that meets with the related operational conditions.

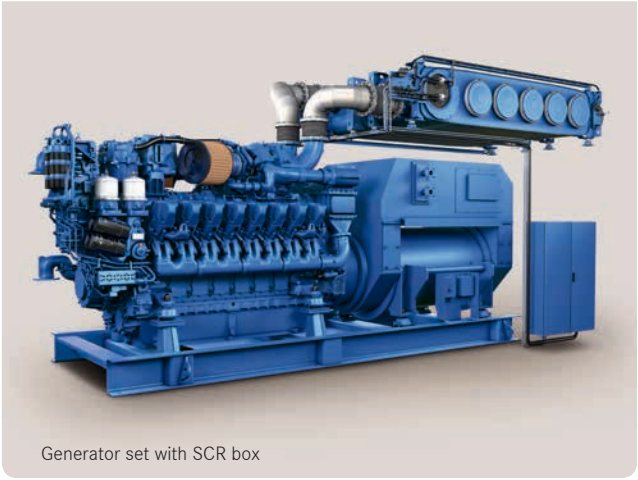
For further information, please contact your distributor or visit www.mtu-online.com/contact

Systems solutions
SCR solution

MTU SCR solution
As installation space is always restricted inside the engine room, the inhouse developed airless SCR (Selective Catalytic Reduction) solution from MTU is compact and maintenance friendly. Besides easily accessible doors for replacement of the SCR catalysts, the system also features an integrated mixing pipe and dosing units. The integrated mixing pipe and DEF (Diesel Exhaust Fluid) dosing allows the shipyard highly flexible pipework between the engine and the SCR box. Additional space to fit the exhaust gas aftertreatment is reduced to a bare minimum. Amonia slip is prevented under all operating conditions by a closed loop regulated control system. To lower life-cycle-costs, switching off the urea dosing while operating outside the emission controlled areas is possible (IMO II mode). Besides the exhaust emissions related features, our SCR system also reduces noise.

SCR - the ideal solution for the marine world
When using EGR (Exhaust Gas Recirculation) technology, the quality of the fuel is essential. Fuel with more than 15 ppm sulfur will lead to the formation of sulfur acid in the EGR cooling process. Sulfur acid will cause substantial engine failures over time. As many vessels operate worldwide, especially in the offshore service and supply business, MTU evaluates SCR as the preferred solution to maintain reliability of our engines and the safety of your vessel and crew. SCR technology allows operation with lower fuel quality. Developing all major key technologies inhouse like, SCR, EGR, turbocharging and common rail fuel injection, means we are able to shape the ideal solution to meet IMO III and EPA Tier 4 emissions regulations. At MTU we treat EGR as the ideal solution for applications like mining or oil&gas onshore, but within the marine world we are convinced that SCR technology grants much higher availability and component lifetime.

SCR Cubical-Box for high-power application



Generator set with SCR box

Systems solutions marine
Combined propulsion systems

Our engineering expertise and operating experience covers a large range of combined propulsion systems, such as:

– Combined Diesel and Diesel (CODAD)
– Combined Diesel and/or Gas Turbine (CODAG, CODOG)
– Combined Diesel-Electric and Gas Turbine (CODELAG)
– E-Drive Systems - Combined Diesel and/or Electric or Hybrid

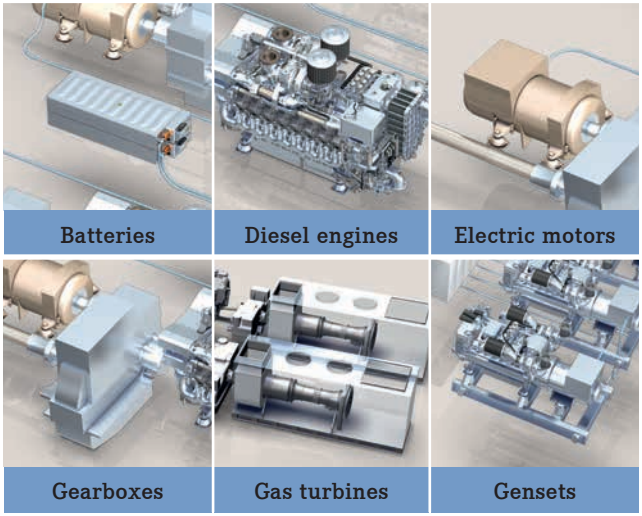
The intelligent combination of diesel engines, electric motors, gas turbines and batteries allows optimal adaptation of the propulsion system to the various operational requirements.

In order to reduce emissions and operating costs, combined systems e.g. diesel-electric propulsion systems are the preferred solution: The mechanical energy produced by the diesel engine is converted into electricity using a generator and then transmitted to the electric motors driving the ship's propellers.

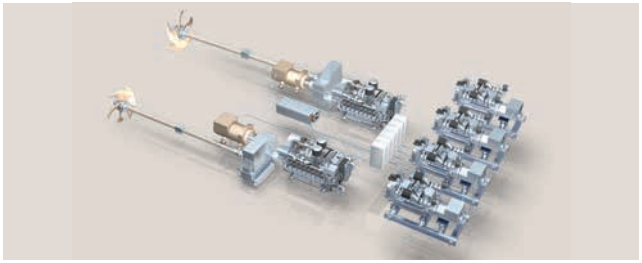
By adding battery modules for energy storage MTU can also provide cutting edge hybrid propulsion systems.

On request, we will serve as the general contractor, taking complete technical and commercial responsibility for the entire propulsion and power generation system as well as the automation system. From project engineering and project management to support and service, MTU is your single source partner for complete solutions.

Propulsion Systems

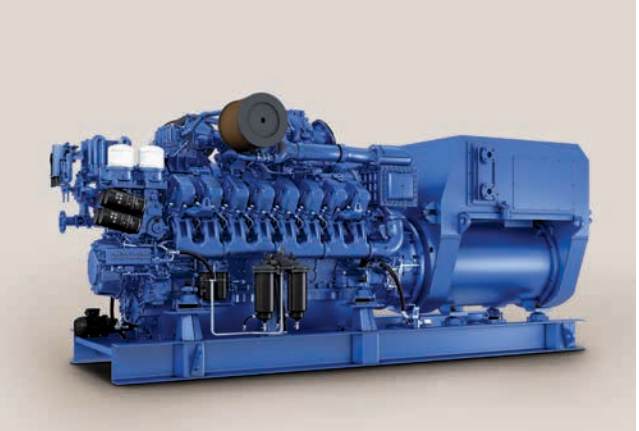


Application example of complete propulsion system

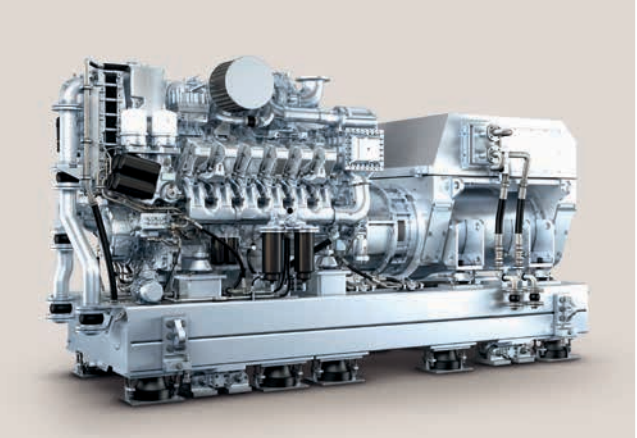


All systems can drive various kinds of propulsors, e.g. FPP, CPP, WJ, Voith Schneider, also in combination with CODAD, CODOG, CODAG, CODELAG or E-Drive propulsion systems.

Systems solutions marine
Marine gensets



Standardized MTU commercial generator set shown with Series 4000.



MTU premium generator set. Here exemplarily shown with Series 4000.

MTU gensets are based on MTU Series 2000 and 4000 engines. Whether you are looking for onboard power, diesel-electric or hybrid propulsion, MTU gensets meet the full spectrum of your requirements.

MTU's gensets are available as a constant speed version in 50 or 60 Hz or as a variable speed configuration with added electronics. Our gensets are tailored to the specific needs of each application. Wheter you are looking for a standradized cost-effective commercial genset or high-end yacht gensets.

MTU also provides emergency gensets for critical situations at sea, when absolute reliability is essential. In addition to gensets for main propulsion and onboard power, MTU also supplies lower-power gensets which can be installed as separate power units in the engine room.

MTU's genset portfolio covers power outputs from 5 to 3,480 kWe.

Your benefits are:

- Gensets based on proven Series 2000 and 4000 engines – of which over 90,000 have been sold worldwide
- Outstanding acoustic optimization for best-in-class comfort (noise and vibration levels can be contractually guaranteed, with all values proven on MTU test benches to minimize risk)
- Featuring special plug-and-play technology such as media plate and integrated piping for very easy installation
- All MTU gensets are classifiable according to e.g. DNV-GL, LRS
- Gensets with high quality finishing and painting dedicated for the yacht market

Automation systems
Integrated ship automation system MTU Callosum

The integrated ship automation system Callosum provides optimal solutions for all types and sizes of ships to comply various requirements.

Callosum_MC – Monitoring and control system

Callosum_MC monitors and controls the entire drive system, onboard power supply, general areas.

– Visualization and Equipment:
  · FPP/CPP/WJ/VS/POD/ SDS/combined systems
  · Joystick control system
  · Dynamic positioning system
  · Integrated bridge system
  · Fire detection system
  · Duty alarm system
  · Machinery telegraph
  · CCTV system
  · Electrical power management system
  · Crew location system
  · Uninterruptible power supply
  · Consoles
  · Switchboards
  · Sensors

– Interfaces:
  · NET-DDE
  · OPC
  · NMEA0183
  · CANopen
  · Modbus

Callosum_DC – Damage control system

Callosum_DC ensures the precise localization of any type of damage caused by fire, flood, collision, grounding.

– Visualization:
  · 3-click technology
  · Static an/or dynamic automated kill cards
  · 3D isometric deck views
  · Plot function
  · Tailor made engineering
  · Situation management
  · Command state board
  · etc.

Callosum_MT – Maintenance support system

Callosum_MT provides support for the maintenance and upkeep onboard – 24 hours a day, 7 days a week.

– Visualization:
  · Online documentation
  · Trending
  · 3D video
  · Check list
  · Fault tree analysis
  · etc.

Callosum_TS – Onboard and land-based training system

Callosum_TS allows training and further education of the crew during ship operation.

– Visualization:
  · Onboard training
  · Land-based training

Automation systems

Standardized propulsion automation systems BlueVision | NewGeneration

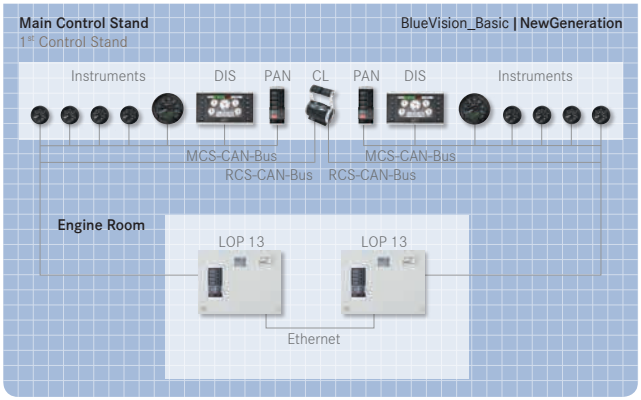
For many years, sophisticated MTU standard automation systems controlled, regulated and monitored the engine functions – always doing a perfect job!

BlueVision **| NewGeneration** automation solutions more convenient than ever before: easy to customize, easy to integrate, easy to operate.

BlueVision **| NewGeneration** is available both in the straightforward non-classifiable version BlueVision_Basic **| NewGeneration** and in the expanded classifiable version BlueVision_Advanced **| NewGeneration** – meeting different requirements according to boat design and customer budgets. The modular system design allows a flexible configuration; intelligent data bus technology ensures reliable data exchange and reduces cable efforts. Optimized interfaces between the propulsion and automation systems result in ideal total solutions that guarantee you security, efficiency and reliability.

With BlueVision **| NewGeneration** MTU offers you a complete and convenient system solution individually optimized for your ship, as well as comprehensive service – all from one source.

Thanks to “plug & play”, the system is as easily installed as it is operated.



Simple interfaces connect the Monitoring & Control System BlueVision **| NewGeneration** with the MTU diesel engine (via EIM) and the gearbox.

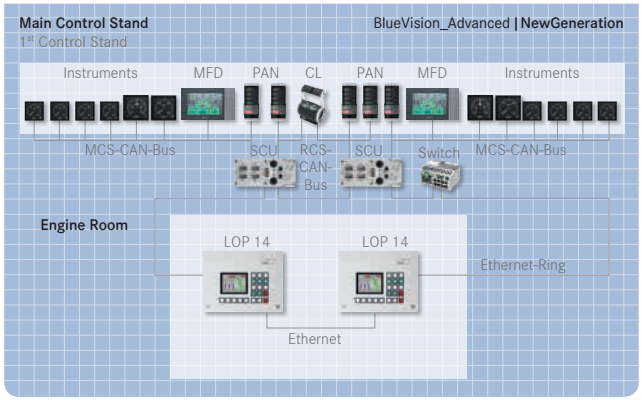
All components are type-approved und type-examination tested in shake / vibration / stress tests.

Customer Benefits

BlueVision_Basic **| NewGeneration** and BlueVision_Advanced **| NewGeneration** are automation systems for propulsion plants in yachts and workboats with MTU Series 2000 or 4000 engines.

BlueVision **| NewGeneration** offers the following benefits:

- High operational availability and reliability of the propulsion plant
- High flexibility thanks to modular system structure and open architecture
- Simple, classifiable system in line with current directives
- Quicker and easier commissioning via structured user dialogue
- Type-tested components
- Development in accordance with current standards
- Optimized operation and visualization of the propulsion plant
- Uniform spare part concept across all MTU Series
- Global sales and service network
- Self-learning “Improved Crash-Stop” in order to stop the ship as quickly as possible



Automation systems

Standardized propulsion automation systems

smart*line* – **blue***line* – **blue***vision*

Perfectly balanced, standardized control and monitoring systems developed and manufactured inhouse by MTU, ensure that our proven marine propulsion technology functions exactly as you would expect it to. The integration of these cutting-edge automation systems provides optimum complete solutions which guarantee safety, efficiency and reliability. Without exception, MTU can always supply a complete system individually tailored to suit your vessel and backed up by a comprehensive service package – all from a single source.

blue*line*
Series 2000/ 4000

Color display – 7,0“

Propulsion control lever

System for
- Non-classified applications
- FPP and SDS propulsion plants
- CPP and WJ by interface
- One to four engine propulsion plants

Options
- Extended to 4 control stands
- Palm Beach control lever
- Hand-held control unit

blue*vision*
Series 2000/ 4000

TFT color monitor

Propulsion control levers

System for
- Non-classified and classified applications
- FPP, CPP, WJ and VSP propulsion plants
- One to four engine propulsion plants

Options
- Extended to 6 control stands
- Printer
- Hand-held control unit

smart*line*
Series 2000/ 4000

Color display – 6,5”

Propulsion control lever

System for
- Non-classified applications
- Twin FPP engine installations
- CPP and WJ by interface

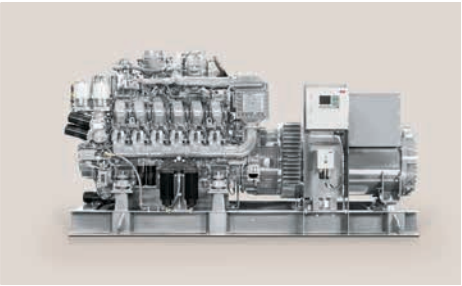
Options
- Extended to 6 control stands
- Palm Beach control lever
- Hand-held control unit

Automation systems
Standardized and system solutions
geno*line*

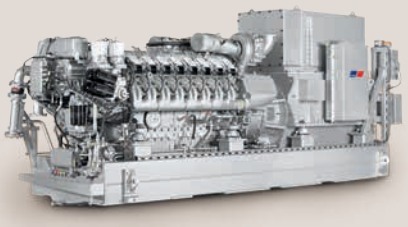
geno*line* is an MTU non-classified and classified automation system for on-board power generation plants. The modular system design guarantees optimum adaptation of the diesel engine and generator to the diversity of operating conditions for the on board power generation. It is available for MTU Series 2000 and 4000 engines.

geno*line* offers the following applications

On-board service power
non-classified and classified

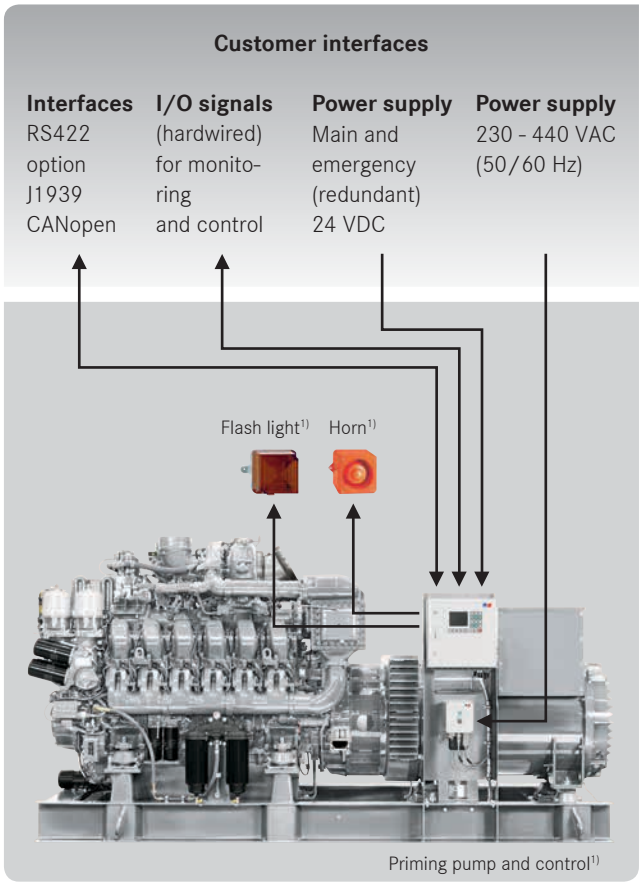


Diesel-electric propulsion plant
non-classified and classified



Special applications
- MIL
- Shock
- EMC
- etc.

geno*line* automation system is an innovative high-end developed system available in two installation versions, with LOP (Local Operating Panel) or as version with switchboard interface.



1) Optional features

Systems solutions offshore exploration & production

Offshore generator sets

We offer complete solutions from a single supplier. All components are integrated, thoroughly tested and supported. Everything is designed to work together, which prolongs preventive maintenance and overhaul intervals. Decades of experience as an offshore specialist gives us the expertise and flexibility you need to keep your drilling operation productive and profitable.

Our offshore product range includes diesel engines and systems for:

– Generator sets for emergency, essential, auxiliary and main power
– Fire pump drivers for mechanical/hydraulic/electric installations
– Mud pump drivers
– Wellserve power packs
– Nitrogen units
– Cranes
– Cement pumps
– Hydraulic power packs

We also offer customized offshore documentation according to project specific requirements.

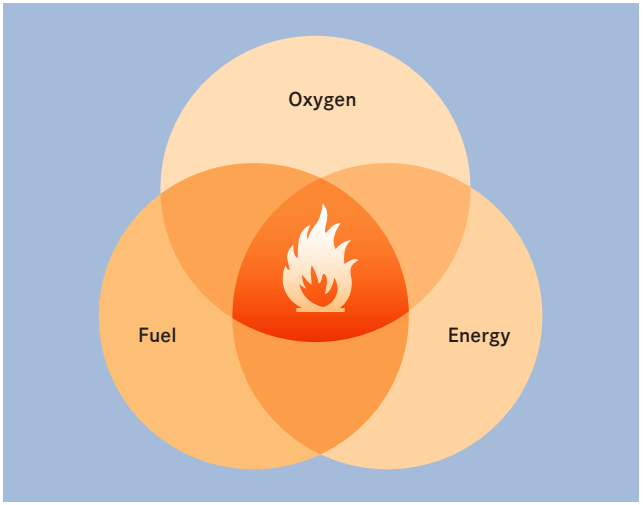
2 Modularized generator drive

3 Standardized generator set

Explosive problem.
Integral solution.
ATEX zone 2 3G IIB T3 certified MTU P-engines

Critical safety factors



Modifications of MTU P-engines for ATEX zone 2
The combination of three factors makes an explosion possible:
– Oxygen
– Fuel/flammable substance (gas, vapors, mist, or dust)
– Energy/ignition source (devices, electrical plants, hot surfaces)

The exclusion of one of these three factors means the elimination of the risk. In order to guarantee safety in potentially explosive environments, a modification of factor 3 – the engine – is the most efficient solution both technically and economically. MTU engines are designed to minimize or even prevent the risk of high surface temperatures and spark generation.

On request MTU P-engines fulfill the requirements of ATEX zone 2 3G IIB T3 according to directive 94/9/EC. This means that they deliver an extremely high standard of safety in conjunction with superior cost efficiency.

Intertek

Example of ATEX certificate for 16V 4000 P63 and 16V 4000 P83 engines

MTU P-engines: certified safety according to ATEX zone 2 3G IIB T3 requirements

MTU P-engines need to fulfill the requirements for ATEX Zone 2 3G IIB T3 according to directive 94/9/EC.

– **Zone 2**: An area in which an explosive mixture of gas is not likely to occur in normal operation and if it occurs it will exist only for a short time

– Category **3G**: Gas (Zone 2)

– Explosion group **IIB**: Explosive mixture of ethylene gas and air

– **T3**: Surface temperature < 200 °C
equivalent to class I division 2 (North America)

Safety is good.
Redundancy is better.
Redundant controller for fire pump drive systems (NFPA 20)

The NFPA-20 standard requires redundant engine controllers on fire-pump drive systems in order to prevent interruptions in the fire-pump water jet during an emergency. MTU is the first manufacturer in the world to offer redundant controllers for engines with common rail injection.

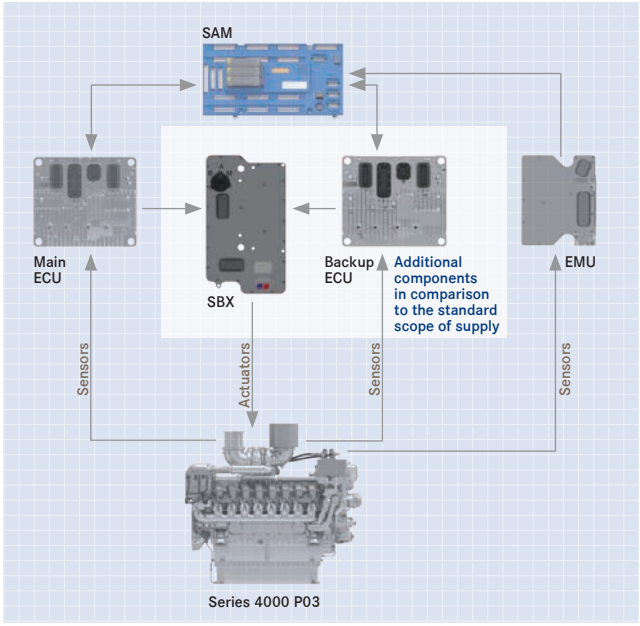
In accordance with this standard, the second controller must be installed on the engine and permanently wired. In the event of a fault on the first controller, it must take over the engine control automatically without interrupting the water jet. This measure increases the availability of your fire pumps and consequently the entire system.

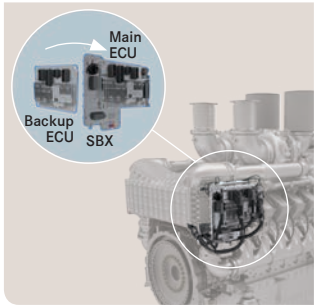
The redundant controllers developed by MTU can be used in direct, hydraulic, and diesel-electric drive systems. To redundantly record all engine data required for controlling, a second sensor set is installed on the engine. The ECU7 engine control unit is used as a main and backup controller. Because the injectors and high-pressure fuel control block are not installed redundantly, triggering of these actuators must be switchable between the two controllers: and so the new SBX1 switch box forms the heart of this system.

Switching
The MTU engine controller offers the option of manual switching, whereby the controller active at any given moment is displayed optically (via LED). The switching process is designed to guarantee the greatest possible redundancy of the system. Optimal use is made of the ECU7 plugs for logic switching and for supplying the new unit. This results in extremely simple wiring.

If switching is necessary, drops in speed and excessively high rail pressure must be prevented. The MTU system guarantees that these demands are met for all types of applications (direct, diesel-electric, or diesel-hydraulic pump drive), all engine cylinder variants (12V, 16V, or 20V), and for every engine base speed (1,500 rpm for 4000 P63 or 1,800 rpm for 4000 P83).

Benefits:
- Achieving the NFPA20 norm for Series 4000 P-engines
- Specifically designed for common rail injection
- Increased availability thanks to redundancy
- Simple retrofitting due to plug-and-play
- All components are developed to work together seamlessly
- All from one trusted source and in the quality you expect from MTU

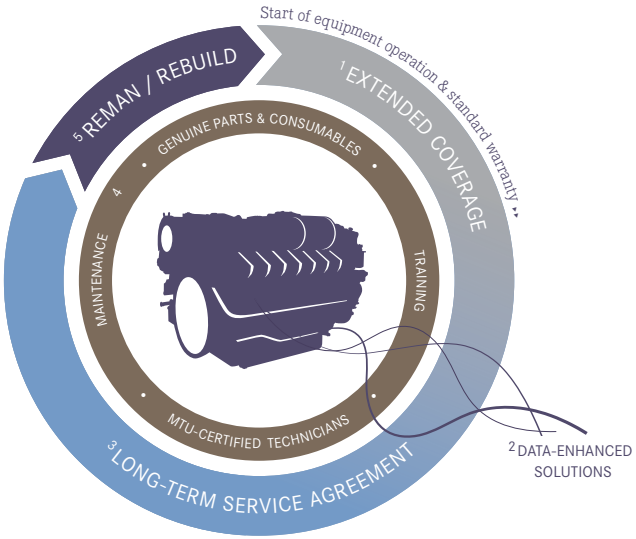




MTU **Value**Care

Ensure a long, reliable life.

As your equipment ages, its needs–and yours–change.
MTU **Value**Care wraps around your MTU investment, providing 360 degrees of customized support, for optimal value at every stage of life.



MTU **Value**Care can help you:

1. Avoid the unexpected with added protection beyond the standard warranty.
2. Make better decisions faster with data-enhanced tools.
3. Maximize availability and optimize lifecycle costs with an individually tailored Long-term Service Agreement.
4. Improve system performance and extend equipment life with on-demand support from MTU.
5. Keep a good thing going with MTU reman/rebuild solutions.

MTU **Value**Care

Rely on MTU expertise.

To give your equipment a long and productive life, choose a partner you can trust. Only MTU-certified technicians know how to get the job done right using proven service methods, MTU-specified maintenance schedules and genuine OEM parts and consumables.

From preventive maintenance to complete rebuild, MTU is your true lifecycle partner. Whatever level of support you need, our global network of factory-trained professionals knows all about your equipment, and is ready to prepare a customized plan to help you maximize performance and minimize lifecycle costs.

If you need us a little:

On-Demand Support—including professional inspections and preventive maintenance recommendations from MTU—helps you identify and address problems early, save on repairs or unexpected downtime, and optimize your equipment's performance and longevity. Inspections include visual assessment, test run and leak check, on-site oil and coolant analysis, diagnostic evaluation and reporting.

If you need us a lot:

Long-term Service Agreements make it easy to plan the cost of maintenance and maximize availability throughout your MTU equipment's lifecycle. The details, terms and periods of each package are precisely tailored to match your individual needs, with maintenance performed by MTU-certified technicians using only genuine new or remanufactured parts.

Never compromise.
MTU engines and systems are built to last with legendary high standards. When it's time for service, don't settle for anything less. For maximum reliability, performance and uptime, choose a name you can trust—MTU.

MTU **Value**Care

Plan ahead.

The annual cost of maintenance can vary dramatically depending on how and where your equipment is used. When optimal equipment availability and performance are essential, and predictable costs are preferred, Long-term Service Agreements can help.

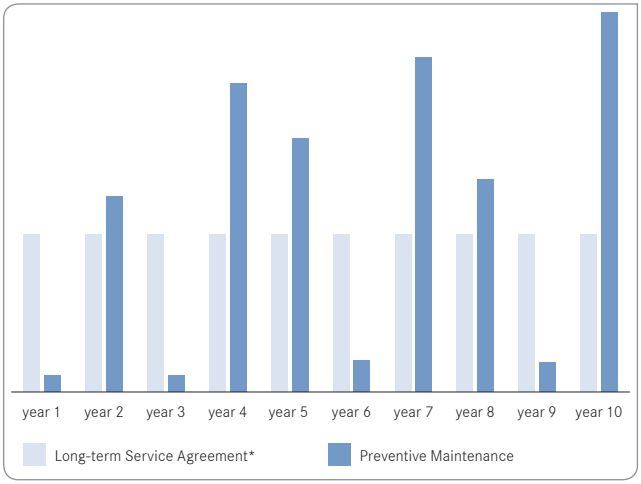
Preventive

All preventive maintenance services up to 10 years according to your approved MTU maintenance schedule, performed by MTU-certified technicians at your local MTU-authorized distributor.

All Inclusive

All preventive maintenance services up to 10 years according to your approved MTU maintenance schedule, performed by MTU-certified technicians at your local MTU-authorized distributor, including all necessary corrective services.

Example: Scheduled Maintenance Costs



*Excludes corrective services

MTU **Value**Care

Protect your investment.

MTU engines—backed by Extended Coverage—provide invaluable peace of mind beyond the standard warranty. With Extended Coverage, you can be assured that the costs of unexpected repairs are covered, with service performed by MTU-certified technicians—upholding resale value and ensuring long-term confidence in your MTU investment.

Extended Coverage protects you from the cost of unexpected repairs beyond your standard warranty, with professional service from MTU-certified technicians and coverage tailored to your needs. Packages can also be extended up to 5 years and are fully transferrable, enhancing resale value. Coverage includes material and labor for troubleshooting, fault clearance and corrective services to engines and on-engine electronics (excluding gearbox, alternators, or similar components). To ensure maximum quality, all repairs are conducted using only genuine MTU parts.

Extended Propulsion Coverage—an exclusive offering for pleasure craft—protects against the cost of unexpected repairs to your complete propulsion system beyond the standard warranty. The package is fully transferable, which enhances resale value. And with expert service performed worldwide by MTU-authorized service centers, you gain invaluable peace of mind.

MTU **Value**Care

Make better decisions–faster.

Digitization is more than a buzzword–good data fuels smarter decisions. Data-Enhanced Solutions from MTU harness that power, giving you vital information and helpful tools to simplify and streamline MTU equipment ownership, operation and maintenance.

Monitor activity from afar.
Identify faults early and make informed decisions quickly–even thousands of miles from the work site–by accessing vital engine and system information online with Remote Services.

Be proactive.
Remote Services can improve your engine's performance, and your profitability, by helping you avoid downtime. Using a telemetric device, important data such as oil temperature, current location and hours of duty is recorded and transmitted in near real-time or at predetermined intervals. Through early fault identification, you can act decisively to increase engine efficiency, prevent damage, reduce downtime, identify necessary replacement parts and save on service and repairs. All you need is a computer with an Internet connection.

Be secure.
Your data is handled with the strictest confidentiality. We provide a secure infrastructure and user administration via our MTU security design.

An onboard telemetric device transmits vital equipment data, accessible in near real-time on your computer screen.

MTU **Value**Care

Keep a good thing going.

Your MTU equipment was built to last thanks to MTU's legendary high engineering standards and unwavering commitment to service and support. And after a long and productive life, MTU provides options to help you go even further.

Turn back the clock.

Factory Rebuilds return your original equipment to like-new condition, delivering the same high standards of performance, service life and quality as the original new product. Factory Rebuilds are provided by the same experts who built your original equipment, utilizing the same rigorous standards as our factory remanufacturing process. As a result, your complete system, including gearboxes, loose parts (oil cooler, etc.) and automation/ electronics, is fully restored.

Valid for Series 183, 396, 493, 538, 595, 652, 956, 1163 and various Defense engines.

Exchange and save.

Factory Remanufactured units help you minimize downtime and take advantage of fixed pricing and fixed lead times. They're faster than an individual overhaul and less expensive than new equipment. Remanufactured products deliver the same high standards of performance, service life and quality as new MTU products, along with identical warranty coverage. And with design and model-related updates, they also feature similar technological advancements.

Local support. Worldwide.

Whenever and wherever you need expert support, MTU specialists are available. Our global service network of more than 1,200 locations–backed by our cutting-edge Parts Logistics Centers–provides you this assurance.To find your local MTU distributor, visit www.mtu-online.com.

Customer Assistance Center

Agents are available 24/7 for fast response to your inquiries and any service needs.

Exhaust emissions

Many countries have implemented environmental legislation to protect people from consequences of polluted air. For this reason an increasing number of countries regulate emissions from specific mobile and stationary sources.

Emission standards may apply internationally, nationally and/ or for specific areas. The enforcement of an emission legislation may
depend for example on the area where the equipment is used and the way it is operated.

The emission legislations may be categorized by power range and/ or cylinder capacity. Emission legislations generally require a certificate which states compliance. Stationary applications may require on-site approvals (on-site emission test) depending on the particular emission legislation.

Please find as follows examples of emission standards which apply to the Marine Industry.
For details please consult the applicable legislation and/or permitting authority.

IMO - International Maritime Organization
MARPOL Annex VI Regulation 13 (NOx) and NOx Technical Code 2008: Marine diesel engines > 130 kW for ships engaged on international voyages to which MARPOL Annex VI applies (= flying the flag of an signatory, or entering waters of the jurisdiction of an signatory to the Annex. Signatory overview see IMO webpage, „Status of Conventions“).
Fixed & floating platforms, including drilling rigs and similar structures, are considered as ships. For those structures IMO regulations are in addition to any controls imposed by the government which has jurisdiction over the waters in which they operate.

Applicability of tiers:
For new ships date of construction of the ship, for engine replacement with non-identical engine or installation of additional engine date of installation. Exemption rules are in place.

Currently applicable emission stages:
- IMO Tier II outside of NOx Emission Control Areas (NOx ECA)
- IMO Tier III is applicable in NOx Emission Control Areas (NOx ECA) only

Emission Control Areas (ECA):
- An ECA may limit NOx, SOx and particulate matter (PM) emissions, or both. MARPOL Annex VI Regulation 14 (SOx and PM emission compliance) requires fuels with less than 1000 ppm (0.1 %) sulphur (since January 1st, 2015).
- The enforcement dates of an ECA will be specified for each ECA individually. For the North American & US Caribbean ECA this has been January 1st, 2016 with regard to NOx.
- Additionally to the North American & US Caribbean, the North Sea and the Baltic Sea are established as ECA for SOx and PM emissions.

Exhaust emissions

US EPA - United States Environmental Protection Agency
40CFR1042: Marine diesel engines > 8 kW for vessels registered (flagged) in the United States.

Applicability of tiers:
Date of engine manufacture. Specific replacement engine rules are in place. Exemption rules are in place.

Currently applicable emission stages:
- < 600 kW EPA Tier 3
- < 1000 kW EPA Tier 3 - replaced by EPA Tier 4 latest by October 1st, 2017
- > 1000 kW EPA Tier 4
- > 600 kW EPA Tier 4 from October 1st, 2017
- Recreational engines: EPA Tier 3

EU - European Union: Commercial Marine
EU Nonroad Directive 97/68/EC as amended by 2012/46/EC: Marine diesel propulsion engines ≥ 37 kW and auxiliary engines > 560 kW installed on vessels operating on inland waterways within EU territories (e.g. Rhine, Danube, Loire etc.).

Currently applicable emission stages:
- EU Stage IIIA
  Central Commission for Navigation on the Rhine (CCNR) rules are defined in the Rhine Vessel Inspection Regulation (RheinSchUO) valid for marine diesel engines ≥ 19 kW installed on vessels operating on the Rhine.

Currently applicable emission stages:
- CCNR Stage II
  Specific replacement engine rules are in place. Exemption rules are in place. Mutual recognition of CCNR and EU emission regulation is agreed.

EU - European Union: Recreational Marine
EU Recreational Craft Directive (RCD) 94/25/EC as amended by 2003/44/EC and replaced by 2013/53/EU from January 18th, 2016: propulsion engines for recreational crafts from 2.5 to 24 m hull length operating within EU territories.

Applicability of stages:
Date of placing the engine/boat into the market. Exemption rules are in place.

Currently applicable emission stages:
- RCD 2

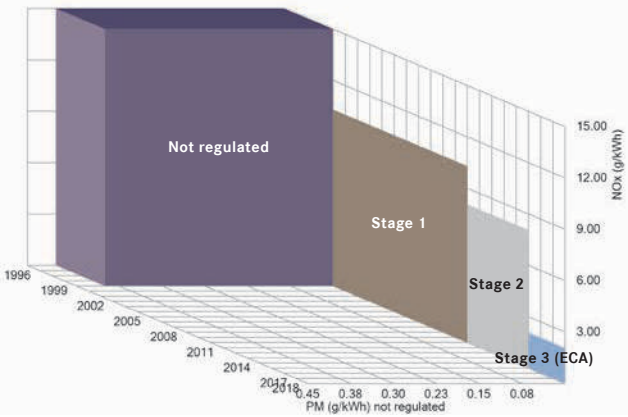
Additional to afore mentioned emission regulations MTU is able to deliver many engines also for regional emission standards such as BSO (Lake Constance) or SAV (Switzerland) on request.

Besides current emission standards MTU is able to deliver also replacement engines with outdated emission standards. Replacement engine rules need to be observed.

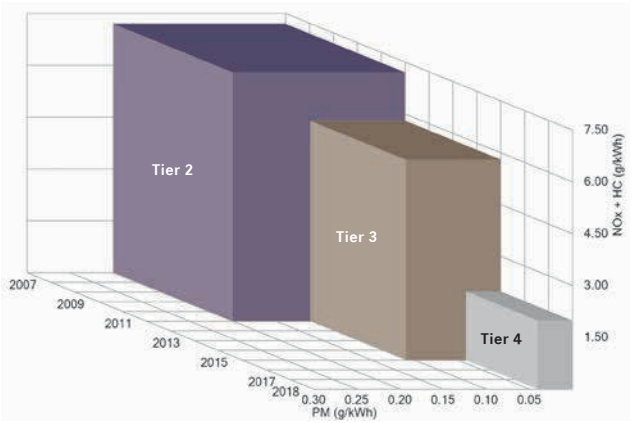
Exhaust emissions

Samples for emission stages in marine industry:
IMO

IMO Seagoing ships



EPA



Abbreviations

T3c	EPA Tier 3 for commercial use
T3r	EPA Tier 3 solely for recreational use
T4c	EPA Tier 4 for commercial use
CCNR II	European commercial inland waterway transport - mutual recognition with EU IIIA
EU IIIA	European commercial inland waterway transport - mutual recognition with CCNR II
RCD 2	European recreational carft directive
IMO I	International Maritime Organization Stage I (beginning form January 2000)
IMO II	International emission standard outside of emission control areas (ECA)
IMO III	International emission standard within emission control areas (ECA)
T1NRMM	EPA Tier 1 - Nonroad Mobile Machinery
T2NRMM	EPA Tier 2 - Nonroad Mobile Machinery

Please note that the engines and systems (only) comply with country or region specific emission requirements and have appropriate emission certification(s) which are explicitly stated in respective RRPS/MTU defined technical specifications. Any Export/Import/Operation of the engine in countries or regions with different applicable emission law requirements is at the customers responsibility.
